2023+ Ford Radius Arm Installation Instructions

Measure from upper front hole to center of the knuckle. Thread the knuckle to set length to values below. You will use the OEM bolts and nuts on the rear hole. Make sure to use the spacer 10015110 on the knuckle end of the radius arm.

Set to dimension shown based on lift installed:
Stock Height = 34-3/4" | 3" Lift = 35-3/8" | 5-6" Lift = 34-5/8"
Overlander/Stomper = 35-1/4"

Record factor pinion angle for reference. You will adjust the lower bag to match the factory pinion angle/caster. Adjust the threaded bar clockwise to extend and counter-clockwise to retract. Torque the M18 and factory bolts to 150 ft-lbs. Its recommended to have the truck aligned after installation.
