

2015+ Mercedes Benz/Freightliner Sprinter Van 2500 - SRW - 2-Stage Rear Air Suspension

UNIQUE 2-STAGE DESIGN

Although factory leaf springs were designed with carrying heavy loads as their primary function, there's only so much force they can handle when traveling down the road. With the addition of our 2-stage Rear Air Suspension, instead of bumps being absorbed by the factory leaf springs, our air suspension attaches to the springs to provide an additional 3-4" of travel.

After being in development for over three decades, the 2-Stage Rear Air Suspension Design is proven to provide you with the ride quality you desire from your vehicle. Whether you're taking the family camping in a trailer home, hauling another vehicle, or just driving to work, our Rear Air Suspension for your 2500 Mercedes Sprinter Van will provide you with a smooth, comfortable ride.

Our commitment to creating premium, reliable product extends far past pickup trucks, as we're continuing to innovate to provide the most value to our customers. If you have a Sprinter chassis and are looking to improve its ride quality with a proven brand, look no further than a Kelderman 2-Stage Rear Air Suspension.
